

Wire Rod

Untreated carbon steel wire rod used in the construction industry to form reinforcing steel shapes.

USES

- Structure tying
- Fabrication of stirrups
- Enabled steel
- Reinforcing steel

CHARACTERISTICS

- Hot rolled
- Diameters 6.35 - 6.5 (1/4 inch)
- Presentations with secure strapping
- Smooth and flawless surface

VENTAJAS

- The rolls are equipped with 4 ties distributed at equidistant points.
- It has an Environmental Product Declaration (EPD) generated through Life Cycle Assessment.
- Complies with A510 standard
- High-tensile strength

CONSTRUCTION WIRE ROD

Code	Diameter	Diameter	Roll weight	Roll weight
	inch	mm	kg/m	kg
2341	1/4	6.35	0.248	2,500

MANUFACTURING STANDARDS ASTM-A-510

SPECIFICATIONS FOR WIRE ROD

Tensile strength	60 kg/mm ²
Creep resistance	2,300 kg/cm ²
